About the Conference

SSI Innovations is proud to announce the “Third Global SSI Multi-Specialty Robotic Surgery Conference (SMRSC) 2026,” a premier global platform dedicated to advancing the future of robotic surgery through innovation, collaboration, and clinical excellence. Building on the outstanding success of SMRSC 2025, this next edition is set to push boundaries further, bringing together the world’s leading minds to explore transformative breakthroughs in surgical robotics powered by the SSI Mantra 3 Surgical Robotic System and the expanding SSI Mantra ecosystem.

SSI Innovations continues its unwavering commitment to transforming healthcare across multiple specialties, including Urology, General Surgery, Gynecology, Head & Neck, Cardiac and Thoracic Surgery, while expanding the horizons of robotic-assisted care through AI-driven intelligence, telesurgery, and mobile surgical platforms such as MantraM 2.0—India’s advanced Tele-Sync Mobile Unit.

SMRSC 2026 will convene an esteemed gathering of global surgeons, medical professionals, technologists, researchers, and visionaries. The conference will spotlight the rapidly evolving landscape of robotic surgery, emphasizing advanced system capabilities, real-world clinical adoption, and the expanding role of Artificial Intelligence, sustainable telesurgery, and mobile surgical solutions in redefining surgical care delivery across diverse environments.

The scientific program will feature distinguished national and international faculty, delivering thought-provoking sessions on the evolution of robotic surgery, AI integration in surgical workflows, and the future of multi-specialty and complex procedures. Attendees will experience live robotic surgeries performed using the SSI Mantra 3 system, along with demonstrations of MantraM 2.0 and immersive, hands-on learning opportunities showcasing next-generation surgical connectivity.

Key themes for SMRSC 2026 include next-generation robotic innovations, enhanced capabilities of the SSI Mantra platform, AI-enabled surgical intelligence, the growing impact of telesurgery, and emerging frontiers such as advanced mobile and autonomous robotic systems. These include visionary concepts like a portable four-legged robotic system, designed for deployment in extreme environments such as battlefields and disaster zones, integrating SSI Mantra telesurgery capabilities to enable remote surgical intervention and life-saving care where conventional access is limited.

SMRSC 2026 aims to serve as a catalyst for collaboration, innovation, and knowledge exchange among global thought leaders, clinicians, engineers, and industry pioneers—redefining the future of surgical care from operating rooms to remote and mission-critical environments, with SSI Mantra at its core.

We invite you to be part of SMRSC 2026, a transformative experience shaping the next chapter of robotic surgery, telesurgical mobility, and healthcare innovation for the years ahead.

Chairman's Message

Dear Friends and Colleagues,

It is with great pride and pleasure that I extend a warm invitation to you for the Third Global SSI Multi-Specialty Robotic Surgery Conference (SMRSC) 2026, scheduled to be held from 9th to 11th April 2026 at the iconic Bharat Mandapam, New Delhi, India.

Building on the remarkable success of our previous editions, SMRSC 2026 marks a significant milestone in our journey to advance robotic surgery globally. Since our inaugural conference, the SSI Mantra Surgical Robotic System has witnessed rapid clinical adoption, with 190+ installations worldwide, enabling 9000+ robotic surgeries across multiple specialties. Notably, we have also successfully completed 150+ telesurgeries, reinforcing our vision of delivering advanced surgical care beyond geographical boundaries.

The SSI Mantra system continues to redefine surgical precision and accessibility, supporting complex procedures across General Surgery, Gynecology, Urology, Thoracic Surgery, Head & Neck, and Cardiac Surgery. Its proven versatility, reliability, and real-world performance have made it a trusted platform for surgeons globally.

At SMRSC 2026, you will witness live robotic surgeries performed by distinguished national and international faculty, showcasing the advanced capabilities of the SSI Mantra ecosystem in diverse and complex clinical scenarios. The scientific program will feature insightful discussions on the evolution of robotic surgery, integration of Artificial Intelligence, and the expanding role of telesurgery and remote surgical collaboration.

In addition, the conference will highlight cutting-edge innovations including tele-proctoring, telesurgery platforms, immersive digital education tools, and next-generation mobile and connected surgical technologies—designed to transform how surgical expertise is delivered and shared worldwide.

New Delhi, with its rich cultural heritage and modern infrastructure, provides an ideal backdrop for this global gathering. SMRSC 2026 promises to be a unique forum for collaboration, knowledge exchange, and shaping the future of robotic surgery.

I look forward to welcoming you to SMRSC 2026 and to continuing our shared mission of advancing robotic surgery for the benefit of patients across the globe.

Thank you very much.

Warm regards,
Dr. Sudhir Srivastava

ROBOTIC SURGERY ACROSS SPECIALTIES

WHO WILL BENEFIT

The SS Innovations Multispeciality Robotic Surgery Conference (SMRSC) 2026 is designed to benefit a wide range of professionals and stakeholders in the field of robotic surgery. Potential beneficiaries include:

Surgeons and Medical Professionals: Surgeons specializing in various disciplines, including cardiac surgery and multi-speciality procedures, will gain insights into the latest advancements and techniques in robotic surgery. The event provides a platform for skill enhancement, exposure to innovative technologies, and networking opportunities.

Healthcare Administrators: Professionals involved in healthcare administration can benefit from understanding the potential impact of robotic surgery on hospital operations, resource management, and patient outcomes. Insights gained from the conference will inform strategic decisions related to technology adoption and healthcare delivery.

Researchers and Innovators: Individuals involved in research and development within the field of medical robotics will benefit from exposure to cutting-edge technologies and methodologies. SMRSC may serve as a hub for collaboration, idea exchange, and potential partnerships to drive future innovations in robotic surgery.

Students and Trainees: Medical students, residents, and trainees interested in surgical specialties have the opportunity to learn about the latest advancements in robotic surgery. The conference will provide valuable educational experiences, exposure to real-time surgeries, and networking opportunities with experienced professionals.

Overall, SMRSC aims to foster collaboration, education, and innovation within the field of robotic surgery, benefiting a diverse audience of healthcare professionals, researchers, industry representatives, and ultimately, the patients they serve.

SSI Technologies

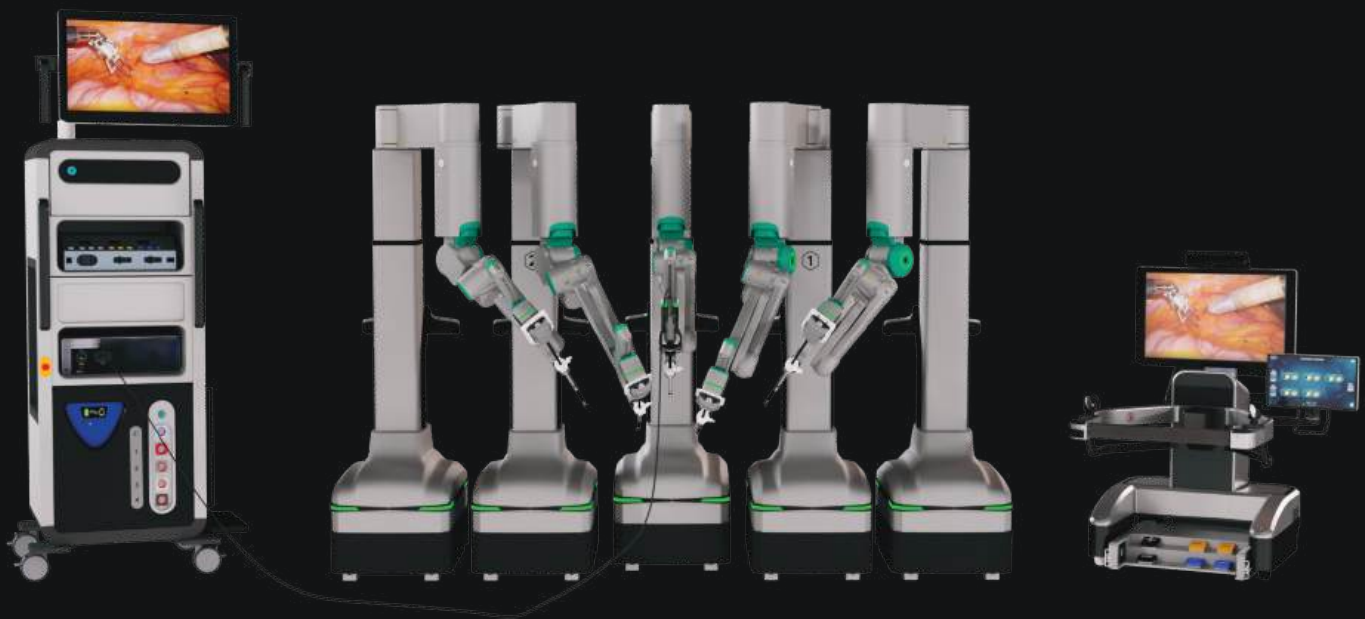

SSI MANTRA 3

The SSI Mantra 3, an advanced robotic surgery system by SS Innovations, continues to set new benchmarks in minimally invasive surgical care. Proudly Made in India, this state-of-the-art platform combines cutting-edge technology with cost-effectiveness, redefining robotic surgery for healthcare professionals worldwide.

At SMRSC 2026, multiple SSI Mantra 3 systems will be available for live demonstrations and interactive experiences, showcasing the system's enhanced capabilities across multiple specialties. Attendees will explore advanced features including tele-proctoring, AI-enabled workflows, and telesurgery capabilities, enabling real-time surgical guidance, remote collaboration, and connected surgical care.

Experience the SSI Mantra 3 ecosystem at SMRSC 2026 and discover how it is shaping the next generation of robotic-assisted surgery, expanding access, precision, and innovation in surgical care.

Proudly Made in India For the World

SSI MANTRASANA

Mantrasana is a groundbreaking innovation by SS Innovations and the world's first portable telesurgeon console, designed to deliver advanced robotic surgical expertise beyond physical boundaries. Seamlessly integrated with the SSI Mantra robotic surgery platform, Mantrasana enables real-time telesurgery, tele-mentoring, and tele-proctoring through secure, high-fidelity connectivity, allowing surgeons to operate or guide procedures from virtually anywhere. Its compact, mobile design ensures rapid deployment across hospitals and remote locations, expanding access to specialized care, enabling timely intervention in critical scenarios, and advancing the vision of globally connected, democratized robotic surgery.

SSI Technologies

SSI AERO

Drone-Deployed Trauma Surgery System

Surgical Precision. Battlefield Speed.

The SSI Mantra-Aero brings expert robotic surgery directly to wounded soldiers in forward battle areas, bridging the critical gap between point of injury and medical evacuation. Deployed via heavy-lift drone, the system lands near the casualty and deploys dual 7-DOF miniature robotic arms with 5 mm instruments, remotely operated by a trauma surgeon through the MANTRA Surgical System console.

It performs haemorrhage control, wound repair, chest decompression, shrapnel extraction, and field suturing, stabilising the patient until medivac arrives.

Flight time: 30 min

Operating time: 30 min

Arms: 2× 7-DOF miniature manipulators

Instruments: 5 mm surgical tools (forceps, cautery, scissors, needle drivers, suction)

Link: Encrypted low-latency remote surgical connection

Deployment: Autonomous GPS-guided drone delivery

This is not a medical kit dropped from a drone. It is the MANTRA platform's proven robotic surgery capability compressed into a battlefield-portable form factor, placing a surgeon's hands where no surgeon can go.

Every minute between injury and treatment costs lives. SSI Mantra-Aero eliminates that gap.

SSI Technologies

PROJECT OPERION

Surgical Intelligence in Motion

Project Operion is a paradigm shift in surgical infrastructure, a fully mobile, platform-agnostic operating theatre engineered for rapid forward deployment. Leveraging Overhead-Integrated Robotic Architecture, the system achieves a Zero-Footprint ground profile, suspending all instrumentation, optics, and robotic arms from a ceiling-mounted rail system.

The result, an unobstructed surgical field with full 360° clinician access and unrestricted equipment reconfiguration in real time.

Unlike conventional fixed-installation surgical suites, Operion is built on a relocatable wheeled chassis, enabling theatre-grade robotic surgery to be mobilised to the point of need, from tertiary care corridors to austere field environments.

Expeditionary Surgical Reach: Extends multi-specialty robotic surgical capability beyond institutional infrastructure, enabling deployment in remote, underserved, and forward-operating environments. Supports accelerated surgical training and credentialing through integrated simulation-ready architecture.

Defence & Humanitarian Operations: Provides a ruggedised, self-contained surgical asset for military field hospitals, Humanitarian Assistance & Disaster Relief missions, and mass casualty triage scenarios requiring advanced interventional capacity.

Telesurgical Command Integration: Purpose-built for low-latency, encrypted telesurgery workflows, enabling remote surgeon oversight and direct robotic control across continental distances with sub-second haptic feedback fidelity.

Operion redefines the spatial and logistical constraints of robotic surgery, transforming the operating room from a fixed destination into a deployable strategic asset.

SSI Technologies

SSI MUDRA

SSI Mudra endosurgical instruments are designed to deliver precision and dexterity across multiple specialties. With over 45 different types of instruments, SSI Mudra enables surgeons to perform various procedures with enhanced control and accuracy. This versatile range of instruments ensures seamless integration with the SSI Mantra system, contributing to superior surgical performance and improved patient outcomes.

NADI - Automated Coronary Anastomotic Connector

A miniaturized automated anastomotic connector, activated by a vascular surgeon or table-side team facilitates Coronary Anastomosis in a very efficient and reproducible way.

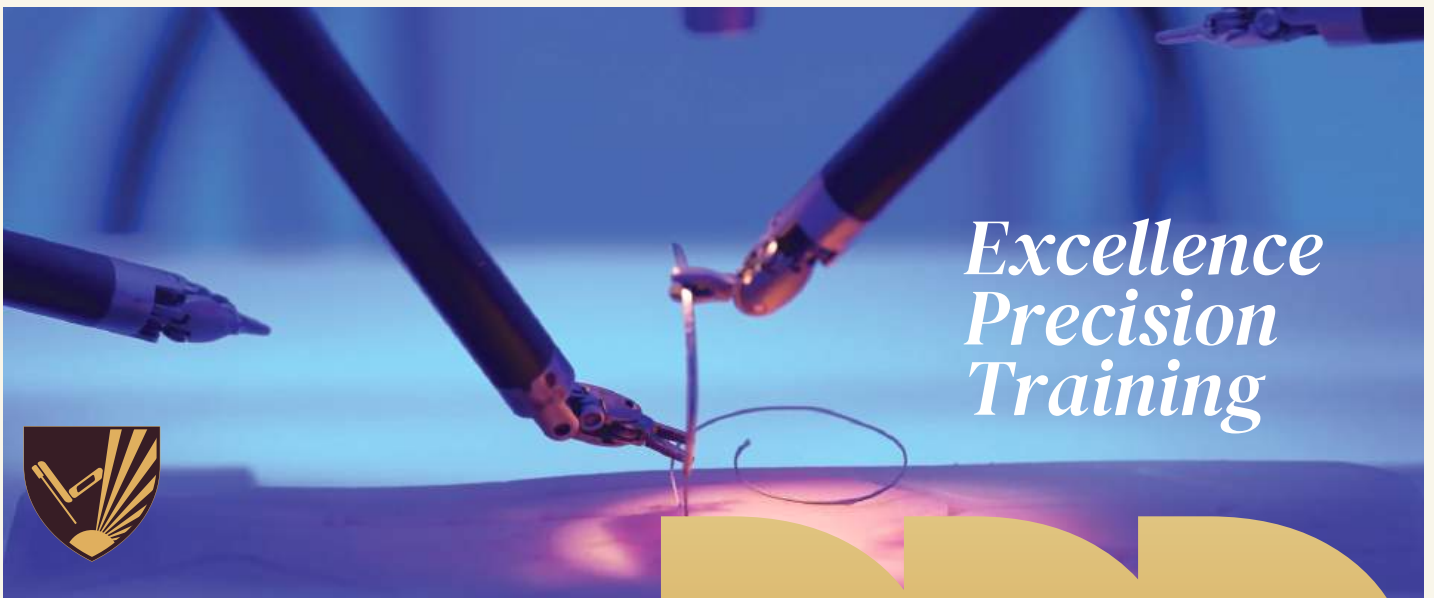

Our Mission is to Democratize Excellence in Robotic Surgery

SSICRS is a groundbreaking institute dedicated to advancing surgical training and innovation. We aim to empower surgeons worldwide by providing access to cutting-edge knowledge, expert mentorship, and multi-specialty robotic surgery education.

With our programs, surgeons gain the insights and expertise needed to lead a global movement in decentralizing and democratizing robotic surgery, ensuring advanced care reaches even the most underserved regions.

- ◆ Engage with pioneering surgeons and clinical leaders.
- ◆ Access expertly designed training and resources.
- ◆ Be part of a global impact initiative in robotic surgery.
- ◆ Lead the way in making surgical excellence accessible to all.
